UNIXO

#1 DAPP In The World Peer To Peer On Ethereum Blockchain Fully Automatic.

UNIXO

What is Unixo?

Unixo is a new revolutionary automatic DAPP (Decentralized Application) working in a matrix system that is totally Automatic. It is distributed in the Ethereum Blockchain using a Smart contract, moreover it can't be cancelled, edited or hacked, Unixo will ever exist until the blockchain does. The code contract is open source which means that whoever can read it and verify by them self the movement of the system. To register is necessary to have an Ethereum wallet , examples of these wallets are Metamask and Trustwallet easy to download in the appstores or browsers.

UNIXO

100% Automatic

Unixo is a project with the purpose to revolutionize the current smart contracts, his system is going to make the economic growth of the users automatic.
Everything will be possible due to the innovative AUTOUPGRADE which is the automation of the level up. The system also have a unique referral link that create a solid structure and an homogeneous growth, nobody will be left behind.

UNIXO

Are My Funds Safe?

The smart contract manages all the movements included the operations of automatic upgrades guaranteeing a further security consolidated from the Ethereum Blockchain, the possibility to be lose your money is zero, considered the fact that all the system and the transactions are PUBLIC in the Ethereum Blockchain.

UNIXO

Login

Log in automatically if you have one of the following wallets installed:

Login automatically

Or you can log in manually, enter your ETH wallet number

Enter ETH Address

Login manually

How It Works?

Register copying your wallet address in login/register page and subsequently you need to confirm the transaction of 0.1 Ethereum from your wallet to join UNIXO.

Once you completed the registration phase you can start to earn.
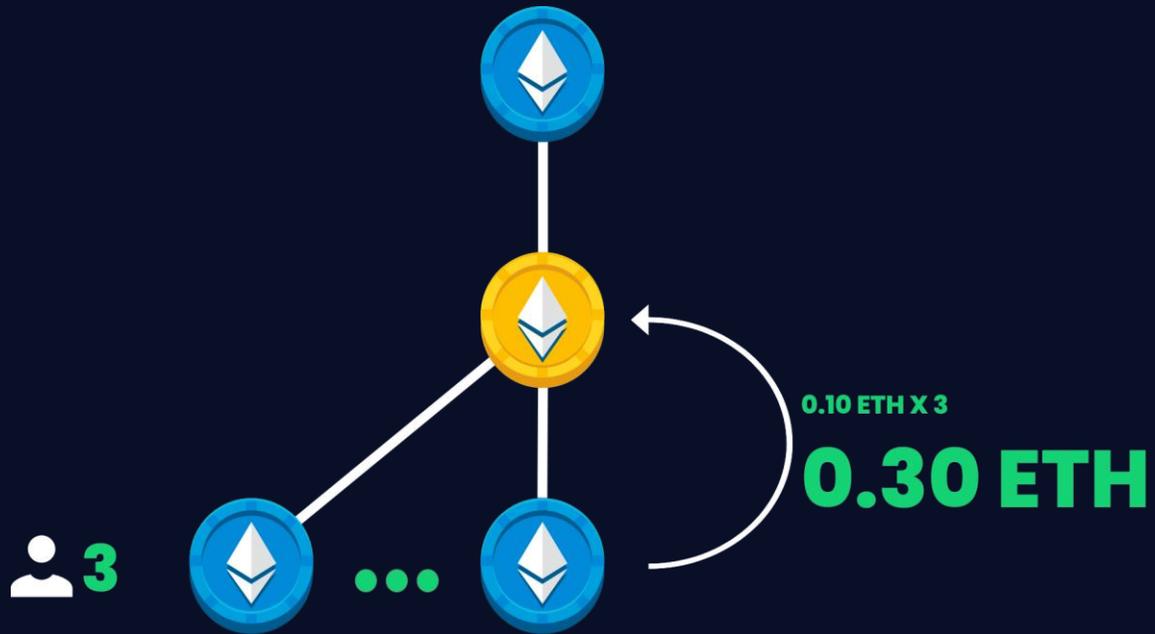

UNIXO

The Structure

The only people that you need to consider are the first three that you bring, they can be friends and relatives or users that joined Unixo that are automatically inserted under you thanks to the SPILLOVER system that will make you receive referrals from your uplines (the users registered before you). Moreover when a new user join it's placed in chronological order after you.

Considered the table Unixo matrix is very easy, to pass the first level you need three referrals with from your account can reach the income needed to make the upgrade in completely automatic way.

Profit Table

10 Level - 1 Downline - 3 Referral Each

Level	Price	Referrals	Income
#1	0.10 ETH	3	0.30 ETH
#2	0.30 ETH	3	0.90 ETH
#3	0.90 ETH	3	2.70 ETH
#4	1.80 ETH	3	5.40 ETH
#5	3.60 ETH	3	10.80 ETH
#6	7.20 ETH	3	21.60 ETH
#7	14.40 ETH	3	43.20 ETH
#8	28.80 ETH	3	86.40 ETH
#9	57.60 ETH	3	172.80 ETH
#10	115.20 ETH	3	345.60 ETH

UNIXO

Level 2 Upgrade

As you can see in this example you will be Upgrated to LEVEL 2 after reaching 3 referrals under your FIRST LINE.

Afterwards the operation is the same for every level, the same three referrals that were in the first level under you will also advance to the next level allowing your account to advance automatically until the achievement of the last level.

In the next slide you can see how easily will be all the other upgrades using the Level 3 Upgrade Example Situation.
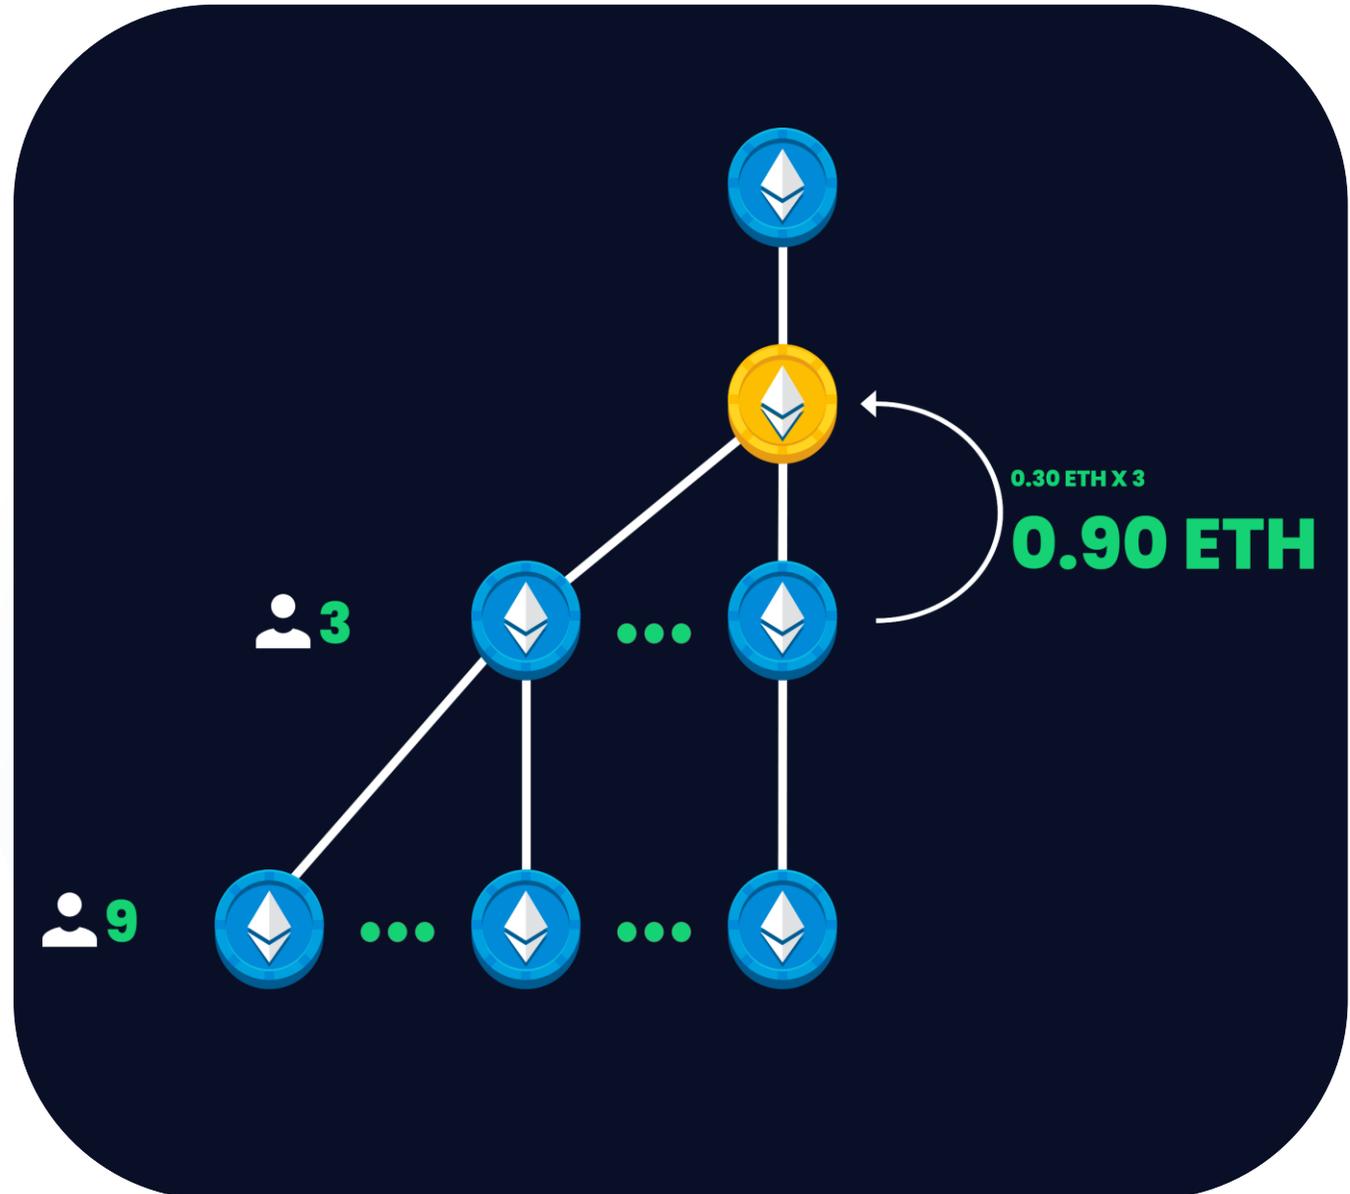

0.10 ETH X 3

0.30 ETH

👤 3

UNIXO

Level 3 Upgrade

As you can see here you will automatically upgrade to Level 3 when you FIRST DOWNLINE get his 3 referral each and so become level 2 automatically.

Other integrated features are the possibility of renewing your subsription in case that the days available are finishing, this action will let the users to receive a recurring and passive income. Also there is the possibility of receiving profits from your downlines, the latter condition occurs when users have not simply renewed their account, they are assigned inactive accounts and therefore their earnings will scaling to the uplines allowing you to receive further profits.

With this system the user's operation are nearly zero, the only necessary action is to bring as many people as possible and let Unixo works for you.
